USAID
FROM THE AMERICAN PEOPLE

RENEWABLE ENERGY SOURCE IN KOSOVO

An A-Z GUIDE for Renewable Energy Investment in Kosovo

GETTING STARTED

The Energy Regulatory Office (ERO) plays a leading role in the legal, administrative, and regulatory requirements for RES project development in Kosovo. The *Law on the Energy Regulation* stipulates the construction of new renewable generating capacities is subject to Authorization Procedures from the ERO. No generation activity can be performed without obtaining a valid license from the ERO (including authorization for construction of new generation capacities from renewable energy sources) **excluding generation activities below 5 MW that are exempt from licensing requirement.**

An

A-Z GUIDE

for Renewable Energy Investment in Kosovo

1 ENERGY REGULATORY OFFICE (ERO) REQUIREMENTS

Renewable Energy Investors prior to filing out their formal request to the ERO for attaining the Authorization for construction of new generating capacities must obtain all required set of documents and permits from relevant Kosovar institutions, as outlined in the table 1 of this document.

New Generation Capacities – means the facility that produces electricity or thermal energy with its primary source from Renewable Energy or Fossil Fuel .

Renewable Energy -. means non-fossil renewable energy sources, such as: wind energy, solar energy, geothermal waters, wave energy, hydro energy, biomass, waste landfill gas, wastewater treatment gas, biogas, as well as every renewable technology that generates electricity and has the certificate of guaranteeing institutions for this technology as renewable

Certificate of Usage – means the document issued by a competent body that verifies compliance of the construction with the construction documentations and applicable construction codes, and which verifies that the construction is suitable for usage.

The following A-Z Guide applies to large-scale RES development.

Application Form	Institution	Legal Basis	Supporting Documents	Responsible Agency
Application for Authorization for construction of new generating capacities	ERO	Rule on Authorization Procedure	Business certificate issued by the Agency for Business registration in Kosovo, including the decision of the board of the company on the authorized representative for Application.	Business Registration Agency
			Evidence on financial capability of the Applicant, and of mother company, including financial reports, Financial Reporting and Auditing, depending on the classification of the enterprise.-	Audit Licensed Company/Applicant
			Evidence on financial capability that the Applicant possesses at least ten (10%) percent of the investment amount. Such evidence shall be backed with bank statements issued not earlier than five (5) days from the Application date.	Bank
			Business solvency certificate of the Applicant, including the certificate of solvency of the mother company, certifying that the Applicant or the mother company is not under bankruptcy.	Court
			Evidence from the tax authorities that the Applicant, including the mother company, has no tax obligations.	Tax Authority
			Evidence on the legal and property rights where the New Generation Capacity is going to be constructed.	Applicant
			Technical and financial feasibility study, for the project with an installed capacity above 1 MW.	Applicant
			Precontract or Contract on Engineering, Procurement and Construction.	Applicant
			Business plan containing technical parameters of the project and the finance plan describing the way of financing, including the total investment cost and the manner of finance; economic and financial evaluation of the project including the financial statements; static and dynamic evaluation of investment.	Applicant
			Municipal act that confirms the proposed Energy Project is allowed by Municipal development or spatial plans.	Relevant Municipality
			Connection agreement with the relevant system operator.	KEDS or KOSTT
			Environmental Consent issued by the relevant entity, if for the subject project is required.	Ministry of Environmental Spatial Planning and Infrastructure
			Water permit (if required).	Ministry of Environment, Spatial Planning and Infrastructure
			Construction permit and dynamic implementation plan.	Ministry of Environment, Spatial Planning and Infrastructure or relevant Municipality

An applicant who is awarded a support mechanism in a competitive bidding procedure, such as auctions for renewable energy conducted by another entity that aims to attract investments in renewable technology, should submit formal acts that confirm that the Applicant is selected as the winning bidder through a competitive bidding procedure and the formal application attaching only the last five required documents as stipulated in the table provided. In case of changes that may occur during the development of the projects, Applicant shall inform ERO in relation to any change pertaining to the documents equired. Upon such change the Applicant shall submit the original documents to the ERO without delays. ERO has the right to require from the Applicant, at any time, any document as outlined in the table that considers it necessary to review.

2 TSO (KOSTT) OR DSO (KEDS) REQUIREMENTS

TSO Network Code and DSO Grid Code, defines the criteria for connection points in TSO and DSO levels pertaining to the generating capacities of solar and wind parks.

The required technical information (connection offer) from TSO (KOSTT) or DSO (KEDS) should be obtained from the relevant institution depending on the connection level.

- **Up to 5 MW new generating capacities apply by default to DSO.**
- **Site specific generation capacities below or equal to 10 MW may apply to the DSO or TSO (depending on grid availability).**
- **Above 10 MW new generating capacities apply by default to the TSO.**

The following documents are required by the TSO (KOSTT) or DSO (KEDS) to apply for the Connection Offer:

Institution	Supporting Documents	Responsible Agency	Institution	Supporting Documents	Responsible Agency
TSO	Application for connection form	Applicant	DSO	Application form	DSO
	Tax for application	Applicant		Info for destination of the project	Applicant
	Design Study or PFS	TSO or third party		Business Certificate of construction company	Business Registration
	Scheme of planning	Applicant		Electrical Project for the facility that will be constructed	Applicant
	Meteorological information	Applicant		Summary of electrical project	Applicant
	Type of fuel	Applicant			

Both institutions, the TSO and DSO, require Technical Approval prior to signing the Connection Agreement and energizing the facility into the transmission or distribution systems. The time and duration for obtaining the necessary Connection Agreement by TSO or DSO is as follows:

Transmission System Operator (KOSTT):

- Day 0: The applicant submits the Connection Application to the transmission network operator together with a proof of payment via mail or directly to the Archive Office of KOSTT, (if the application is submitted by post-mail, the counting of days begins when KOSTT accepts the application).

- Days 1-30: KOSTT reviews and draws conclusions if the connection planned by the Connection Application is (or isn't) technically and economically possible and in accordance with the provisions of the Grid Code, and if it meets the conditions and doesn't represent a problem for the safe operation of the transmission system.

- Days 31-90: KOSTT prepares a Connection Offer which it sends to the Applicant together with the draft Transmission Network Connection Agreement.

- Days 91-120: The Applicant reviews the Connection Offer for the transmission network submitted by KOSTT, which can then be signed.

- Days 121-150: The Applicant and KOSTT review/negotiate and sign the Transmission Network Connection Agreement.

Distribution System Operator (KEDS):

- Phase 1 (Application): In this phase, applicant submits the application for connection to DSO, along with the required documentation.

- Phase 2 (Connection Offer): Based on the application submitted from applicant, DSO will prepare a connection offer within 30 calendar days (from the day of submission of the application). If additional information is required, DSO will inform applicant within 10 days of submission of application to provide additional information. The deadline for connection offer can be extended for an additional 30 calendar days for more complex connections. In such an event, DSO is obliged to inform the applicant in written.

- Phase 3 (Acceptance of Connection Offer of DSO): If the applicant wishes to accept the connection offer, it is obliged to accept that offer in accordance with all its terms as stipulated in methodology. After accepting the offer, the applicant will sign a construction agreement and make the payment in accordance with connection offer of DSO within 30 days of submission of Connection Offer. At this phase, draft connection agreement will be attached to Connection Offer.

- Phase 4 (Construction Works): At this phase, the applicant may choose DSO or another licensed contractor to perform the necessary works for construction of electrical network for connection.

- Phase 5 (Technical acceptance): After completion of constriction works for implementation of electrical network for connection, the applicant will issue a request to DSO for technical acceptance. Within 10 working days, DSO will organize the technical team for inspection at site and issue positive or negative report based on the findings. If positive, DSO must immediately approve the connection from the DSO, and a copy of the technical acceptance is also handed over to the applicant.

- Phase 6 (Connection Agreement): After the construction works have been completed and technically accepted by DSO, the connection agreement can be signed. Connection agreement is considered closed/done on the day when it's submitted (signed) to DSO.

- Phase 7 (Connection/Energizing): After signing the connection agreement, DSO will implement the connection/energizing the assets within 5 days from commissioning.

3 ENVIRONMENTAL AND CONSTRUCTION REQUIREMENTS

Implementation of renewable energy projects in Kosovo involves prudent consideration of construction and environmental requirements. The *Law on Environment Protection No.03/L-025 and Law on Construction No.04/L-110* approved by Kosovo Assembly stipulate in detail the environmental and construction requirements related to the development of energy generation projects.

In order to obtain Authorization from the ERO for construction of new generating capacities, investors are obliged to have **Environmental Consent** as well as a **Construction Permit**.

Law no. 08/L- 181 on Environmental Impact Assessment (EIA) requires potential investors developing projects to obtain the Environmental Consent from the Ministry of Environment Spatial Planning and Infrastructure (MESPI). The issuance of the Environmental Consent will be subject to the Environment Impact Assessment report for projects. The projects will be subject of individual examination in accordance with criteria determined in the Law, concluding whether they must undergo EIA assessment or not.

The process of issuance of the Environmental Impact Assessment requires the following steps:

- Application (request) submitted should be in compliance with requirements stipulated in the Law 08/L - 181. The complete request for review will be published on public notice board in the Municipality, the official website of the Municipality and the Ministry five (5) days from the date the applicant submits the request together with required documents

- Ministry is responsible within thirty (30) days to inform in written format the applicant whether their project is likely to have e significant effects on the environment and requires Environment Impact Assessment or not. In exceptional cases. such as complexity of the project, size and location, the EIA Commission may postpone the deadline and notifies applicant in writing on the reasons for the postponement. This deadline cannot be longer than sixty (60) days from the day the request for application has been submitted.

- The decision on selection is published on public notice board in the Municipality, the official website of the Municipality and the Ministry five (5) days from the day of issuance of the decision.

- If no report of EIA is required, the case is proceeded to Municipality for issuance of Municipal Environment Permit. In contrary, if Ministry determines that the projects require EIA, the process is forwarded for further review.

- Upon receiving the response from Ministry that EIA is required, Applicant will be responsible to prepare an Environmental Impact Assessment report which should be conducted by a licensed legal and natural person, in accordance with AI 10/2017.

- EIA report submitted by Applicant will be sent for review within five (5) days from the day of the receipt to the Commission in Ministry. Ministry may in certain cases require the opinion of external experts for EIA report.

- Public and interested parties will be informed electronically and through public notification, and will be enabled to participate in all stages of EIA. The public consultation period on the EIA report cannot be shorter than thirty (30) days. Report will be published in Ministry's web-page for written comments from public and interested parties.

- The EIA report will be subject of public debate which will be organized by Ministry in cooperation with Applicant and relevant Municipality. Ministry is responsible to reflect the input received through public debate within twenty days (20) days after the session. EIA Commission may require from applicant to update or change certain elements of EIA. Applicant will fulfill the documentation within (30) days, whereas the changes required should be implemented within a deadline of (10) days and submitted to Ministry.

- The decision on Environmental Consent shall be prepared by the Ministry within ninety (90) days from the date of receipt of the EIA Report and public consultation period is over. After decision is taken, the Ministry notifies the applicant and the Municipality in which the project will be implemented. The decision for approval or rejection of environmental consent, along with the attached conditions, are published on the official website of the Ministry and Municipality five (5) days from the issuance of the decision.

- The approved Environment Consent will have a validity of two (2) years. Environment Consent precedes the Construction Permit or other permits as stipulated in Law for Environmental Impact Assessment article 7 paragraph 5

The investor is required to obtain the necessary permits pertaining to the construction of renewable energy facilities. *Law on Construction* No.04/L-110 and Administrative Instruction (AI) on setting procedures for submission and review of the applications for terms of Construction, Construction permits and demolition of permits for category I and II of construction (AI 06/2017) and for category III (AI 01/2019), determines the criteria and procedures for application and issuance of Construction Permit. Annex 1 of the Construction Law, Article 1, Paragraph 18, states that the Ministry of Environment and Spatial Planning is responsible for issuing Construction Permits for renewable energy facilities with capacities exceeding 10 MW. Such projects rank as Category III of construction works or category of construction works with high risk or national interest. In contrary, the local Municipality, per article 19, paragraph 2 of the same law, has the authority to issue required permission for all construction projects less than 10 MW, ranking as category I and II or construction work with low and medium risk. The issuance of a Construction Permit consists of two stages:

- **Stage I**: the competent body shall establish the terms of construction, within fifteen (15) days of receipt of an application for terms of construction for category I construction works and thirty (30) days for categories II and III;

- **Stage II**: the Construction Permit shall be issued by the competent body within thirty (30) days of receipt of an application for a construction permit for category I and forty-five (45) days for categories II and III

The following steps are required for obtainment of Construction Permit from the relevant Ministry:

- Application accompanied with supporting documents in accordance with Law on Construction article 20 paragraph 3.

- Once the evidence of the payment of Construction Permit fee has been submitted by the Applicant, the responsible official at Ministry shall, within thirty (30) days for category I and within forty-five (45) days for category II and III, issues the Construction Permit from the date of submission of the application.

- In the event that the responsible official of the Ministry has not informed the applicant of its decision within such period, the Construction Permit will be deemed issued.

- In event of incomplete application information for a construction permit, the responsible official shall notify the applicant of the steps necessary to complete the application within eight (8) days for Category I and within fifteen (15) days for Categories II and III. If corrections are necessary, the applicant shall correct the application within eight (8) days for category I construction works and fifteen (15) days for categories II and III construction works.

- If the applicant does not meet the required deadlines after notification, the responsible official may reject the application.

- The Construction Permit shall become void if the applicant does not begin construction within one (1) year from the date of issuance of the Construction Permit. The period of validity of the Construction Permit may be extended for one (1) year at the request of the applicant.

In contrary, if the renewable energy facility falls below the 10 MW capacity as stipulated in article 2 of Annex 1 of the Contraction Law, the Construction conditions and Permit will be subject to the relevant Municipality.

The assurance of the required documents, namely Environment Consent and Construction Permit, and fulfillment of the conditions required, enables the operator to apply through a regular procedure for an Environmental Permit, in accordance with Article 31 of the Law for Environment Protection and AI. No. 04/2022 on Environmental Permit, in the Ministry of Environment, Spatial Planning and Infrastructure. The process is as following:

- The application will be reviewed by a Commission within thirty days (30) from the day of receipt of the request. If the submitted documentation is not considered complete, the Commission notifies the operator to complete the required documentation within thirty (30) days. In case the application is incomplete, the applicant will be notified to submit the required documentation within forty-five (45) days. If within the deadline the documentation is not completed, the Ministry terminates the procedure.

- The Environmental Permit is issued when it is ascertained by the Ministry that the operator meets the conditions set out in the AI 04/2022. The validity of Environmental Permit is five (5) years.

After the applicant has secured all required documentation, including the Environment Permit and Construction Permit, as well as constructed the generator, the operator must apply for the Occupancy Certificate. The application for Occupancy Certificate must be accompanied with the following documents:

- signed protocols verifying the completion of all the cycles/phases of construction defined for the construction works in the construction documents.

- evidence of positive results of testing conducted pursuant to the Code.

If the conditions, as provided by Law on Construction, have been fulfilled, the competent body shall issue the occupancy certificate, within fifteen (15) days for category I and within thirty (30) days for categories II and III, from the day of receipt of document.

The following documents are required for obtaining Environmental Consent, Environmental Permit and Construction Permit from the Ministry or Municipality:

Aplication form	Institution	Supporting Documents	Responsible Agency
Environmental consent	Ministry of Environment ,Spatial Planning and Infrastructure	• Application Form (the name, address, status of the applicant and the name of the project)	Ministry
		• Proof of payment for the Environment Consent service	Applicant
		• Business Registration Certificate	Applicant
		• Certificate on immovable property rights	Municipality
		• Copy of the plan with coordinates in Kosova Ref System	Business Registration Agency
		• Land survey plan by licensed cadastral surveyor	Municipality
		• The contract for use of parcels in case the parcel is not owned by applicant	Municipality
		• The consent from Municipality for the project or notification -information according to Municipality Development Plan	Applicant
		• The simplified project based on criteria set by the Law on EIA for the proposed project, the description of the project, the description of the impacts of the project on the environment.	Applicant
		• EIA Report based on the criteria set on Law on EIA	Applicant
		•	Ministry/Applicant
		Completed Questionnaire	
		If Environmental Impact Assessment report required, the following documents must be submitted:	
		• Application form	Ministry
		• Plan with limits of the project	Applicant
		• Detailed description of the site	Applicant
		• Maps and photographs showing the location of the project	Applicant
		• Existing plans for use of the territory where the project is located	Applicant
		Decommission plan	Applicant
		• Decommissioning plan in case of closure of the project	Applicant
		• Risk Assessment and emergency plan	Applicant
		• The municipal Assembly consent on realizing of such activity	Municipality
		• Copy of business certificate	Business Registration Agency
		• Possessions list certificate of real property rights	Municipality
		• Copy of the plan with coordinates	Municipality
		• Situation plan	Municipality
		• Public and stakeholders' consultation data (MOM, presented materials, list of participants, photos etc.)	Applicant
		• Contract about use of parcels and facilitates in case applicant is not the owner	Applicant
		• Evidence on project investment amount	Applicant
		• Payment invoice for fee for the environment consent service	Applicant
		> **Phase 1 Construction Conditions**	
		• Application Form	Applicant/Ministry
		• Location Data of Construction Facility	Applicant
		• Conceptual Project should include:	Applicant
		- Illustrative report: the overall concept of the project, the characteristics of the surrounding space within fifty (50) meters from the boundary lines of the cadastral plot of the project	
		- Technical report: construction works and technical and technological characteristics of the project	
		- Environmental, Health and Safety Report: Include Pre Feasibility Study of the Environment, First Indications and Measures on Health and Safety at Work	
		- Macro Location Study: Describes the context in which the project is located and includes the plan of site construction, graphical plan/ surface of parcel [to be further defined according to the respective project	
		- Economic and financial study: The economic and financial framework of the project, including the assessment of expenditures	
		• Proposed construction conditions	Applicant

Construction Permit over 10 MW	Relevant Municipality	> **Phase 2 Construction Permit** • Application Form • Copy of plan and certificate of ownership • Consent for environmental impact assessment • Administrative legal act establishing the conditions of construction, if required • Approvals for connection to technical infrastructure services. • Consent for fire protection. • Approvals according to the requirements of the Cultural Heritage Law for construction work within the perimeter of cultural heritage. • Other consents • Main Project must include: - Architecture project together with the conceptual project - Structure Project - Machinery Installation Project - Project of electrical installations - Hydro-technical installation project - Geometric Elaborate - Geodetic Elaborate; - Elaboration of site-building organization - Elaboration of construction physics - Elaborate Fire Protection - Other	Applicant/Ministry Applicant Ministry Ministry Relevant utility Emergency Management Agency Ministry Ministry/Municipality Applicant
Construction Permit less than 10 MW		> **Phase I Application for Construction Condition Category I and II** • Application Form • Geodetic survey of the cadastral parcel and the adjoining cadastral parcels from orthophoto and existing building within fifty (50) meters from the boundary lines of the cadastral parcel where the applicant proposes to build • Photos of the surrounding environment of the cadastral parcel • Conceptual design • Copy of plan and certificate of property from Cadaster • Preliminary consents from Institutions and Public Services: Electricity, Water and Sanitation, District Heating if applicable, Environment Consent, Fire Protection Consent and similar.	Applicant/Ministry Applicant Applicant Applicant Applicant Municipality Ministry/Municipality
		> **Phase II Application for Construction Permit Category II** • Application Form • Copy of plan and the ownership of certificate • Approval for connecting in technical infrastructure utilities • Approval of EIA • Fire protection consent • Administrative legal act establishing the construction condition • Copies of professional licenses of those who prepared the project • Technical design including: - Architecture design with Schematic design - Structural design - Mechanical Installation design - Electrical installation design - Hydro-technical installation design - Geo-mechanical Elaborate - Construction site organization elaborate - Construction physics elaborate - Fire Protection elaborate - Other	Applicant Applicant Relevant Utility Ministry Emergency Management Agency Ministry Applicant Applicant

Environmental Permit	Ministry of Environment and Spatial Planning and Infrastructure	• Environmental Permit Application form (Annex 1 of AI, 04/2022)	Ministry/Applicant
		• Environmental Permit Application (Annex 2 of AI 2022)	Ministry/Applicant
		• Business certificate	Applicant
		• Environmental consent decision issued by the Ministry	Applicant
		• Evidence of the conditions set out in Annex 2 of the AI 04/ 2022	Applicant
		• Fulfilling the environmental conditions set by commission after conducting the site visit	Applicant
		• Depending on the activity:	Applicant
		• Certificate of use, or document from the Municipality/Ministry, to allow the exercise of activity in accordance with the application for environmental permit and environmental consent	Applicant
		• Water permit use for water use and water discharge by RRBA	Applicant
		• Consent from EMA	Applicant
		• Other previously issued permits related to the respective activity	Applicant
		• Invoice for payment of the service fee for the environmental permit	Applicant
		• The documentation and fulfillment of the environmental conditions should be submitted to Ministry in five (5) physical copies and one (1) electronic form (CD) signed by responsible person of the company	Applicant

4 AUTHORIZATION

Once the necessary documents and permits have been obtained, as stipulated in the Table 1 of this document, RES Investors will apply for the Authorization to the ERO, including payment of applicable taxes. The Application with all accompanying documents should be submitted in written format in one (1) original and one (1) electronic form. When the Application is submitted as electronic application through internet the Applicant submits only one (1) electronic copy.

The RES Investor is also responsible for publishing in (2) daily electronic newspapers information about its RES project application, namely:

> **A short summary of the application content.**

> **Information allowing stakeholders to express interest or lodge objections regarding the project with the ERO within 8-days from the date of announcement.**

The notification published in the media will also be published in the ERO website. If ERO receives any objection on the subject Application, it will provide a copy of such objection to the Applicant and publishes the same one on the ERO website.

The deadline for reviewing the application for new generating capacities is (30) calendar days from the day ERO informs the RES Investor that the application process is complete. For reviewing each Application, ERO establishes a working group within the ERO, comprised of three (3) to five (5) members. The role of the working group is to prepare a report which will include the following:

- Technical, economic and financial capabilities of the Applicant.
- Compliance of the project with the energy strategy, or any other policy document for renewable energy sources.
- Location of the new generation capacity.
- Technical solution for connection to the network.

If ERO considers that the RES Investor has fulfilled all the requirements, it will issue a Decision on Authorization for a duration of twenty-four (24) months, confirming the right of the RES Investor (Applicant) to commence with the construction. The deadline can be adjusted for an additional (12) months, if justified by RES Investor.

Upon issuance of the Decision on Authorization, ERO requires within (30) days from the RES Investor (Applicant) to submit a financial guarantee, issued by a commercial bank or insurance company effective for covering the period from the issuance of Authorization until the finalization of the construction of the Energy Project. The financial guarantee amount will differ based on the project value as follows:

- For projects with a value up to € 500,000.00 the Applicants pays a value of 10% of the project value;
- For projects with a value from € 500,001.00 up to € 1,000,000.00 the Applicants pays a value of 8% of the project value;
- For projects with a value above € 1,000,001.00 the Applicants pays a value of 7% of the project value

If the said amount was submitted by RES Investor (Applicant) during competitive bidding procedure such as auction for renewable energy, it will not be required by ERO.

5 FINAL AUTHORIZATION

The RES **Investors opting to construct a new generation capacities over 5 MW are required to apply for a Generation License**, in compliance with the Law on Energy Regulation and Rule on Licensing of Energy Activities in Kosovo. However, **new generation capacity of electricity not exceeding 5 MW does not require a generation license.**

Once the RES Investor has completed the construction of new generating capacity, ERO will consider the project finalized upon submission of the Certificate of Usage for the Energy Project ,issued from the competent authority. The Environmental Permit issued for the Energy Project for Construction of New Generation Capacities, shall be a condition for commencing of commercial operation.

Issuance of Authorization from ERO, including the necessary technical approvals from the relevant energy institutions, enables the RES Investors to sign a Power Purchase Agreement (PPA) with the Market Operator.

Currently, RES Investors in Kosovo can sell their electricity output generated from RES under a Regulated Framework or Market based conditions. The Regulated Framework provides a reference price approved by Regulator and guarantees a PPA with Market Operator. Investors may opt to sell their generated output with unregulated prices based on the open market conditions which does not guarantee a power purchase agreement with market operator.

According to the Regulated Framework, as specified in the Rule for Support Schemes, the Power Purchase Agreement for investors will have a minimum duration of 1-year and may last up to the validity period of the investor's generation license issued by the ERO. However, if the investor is not required to obtain a Generation License, the duration of the Power Purchase Agreement will be limited to a maximum of fifteen [15] years.
